Smartwatch is a must-have gadget for every enthusiast of an active lifestyle! Thanks to the built-in sensors, you can check the route traveled, atmospheric pressure, altitude, heart rate, pressure. The watch wirelessly synchronizes with a smartphone, and a dedicated application allows a detailed view of the collected data. The watch is very comfortable and suitable for use in all conditions thanks to the **IP68 standard**. The watch is characterized by a designer and elegant appearance.

The smartwatch has a number of functions and amenities, thanks to which you will be able to easily and easily monitor your activity as well as SMS, Mail or Facebook notifications without the need to use a Smartphone.

The watch will also check your basic vital functions such as blood pressure, heart rate.

Thanks to the various types of physical activities that the watch has, it will be an indispensable gadget for people who value an active lifestyle.

- Running
- Going
- Climbing
- Cycling
- Swimming
- Ping-pong
- Basketball
- Babington
- Football

Our Smartwatch has **the IP68 Standard** . Under this symbol, there is already excellent protection against water and dust. This means that you can safely use the smartwatch while swimming in the pool.

We should also remember that immersion resistance is one thing and the water jet resistance one thing. A device with the IP68 standard, although it can submerge to a depth of several meters, does not necessarily have to withstand being under a strong stream of water.

The smartwatch will monitor vital functions and physical activity around the clock (24/7). Thanks to the application, you will have access to all information from the last day, week, month and even year.
